

TARIFF ODFL 100 – O

Effective 3/2/2020

ITEM 151-50 – APPLICATION OF RATES - PALLETS

When tariffs governed by this Tariff provide rates stated in units of "Per Pallet" and a maximum weight per pallet is stated, the following will apply. If the total shipment weight exceeds the maximum stated weight per pallet, multiplied by the number of pallets:

1. Divide the total shipment weight by the stated maximum weight per pallet.
2. Round all fractions up to the next whole number.
3. Use this number so calculated to determine the number of pallets to be charged for at the stated rate per pallet.

EXAMPLE:

Stated maximum weight per pallet equals 2,000 pounds.
Shipment consists of 4 pallets with total weight of 9,000 pounds.
Divide 9,000 pounds by the 2,000 pound stated maximum = 4.5.
Round 4.5 to 5 pallets.
Charge to be computed at the applicable rate per pallet for 5 pallets.
